

Week 2 lab

COGS 108, 9:00-9:50AM (B01)

<https://github.com/alexavndra/cogs108-b01>

Introduction

Third year undergrad Machine Learning major +
Computer Science minor

Data Management Assistant at Scripps
Institute of Oceanography

Avid vintage shopper, especially vintage
designer and Levi's; also I have a cat!

Email: arh003@ucsd.edu

Office hours:

<https://calendly.com/alexandrarh/office-hours>

Logistics, tips, FAQ??

1) What is section for?

Section is NOT required, but we recommend showing up BECAUSE...

- Demos!
- IRL help, experience, and practice
- Information is on hand (Stack Overflow? Don't know her)
- Ask questions directly

2) Extra credit□□□???

...yes

- Be a top participant on Campuswire (+0.5%)
- Do pre *and* post-course surveys (+0.25% each)
- Attend guest lectures (+0.25%)
- Submit guest lecture questions (+0.25%)
- Fill out all 7 weekly project surveys (+0.25%)

> 75% of all COGS 108 fill out SETs (+0.5%)

she wants my sandwich

extra credit

3) How to do/turn in labs, assignments...

The screenshot shows a web browser window with the URL `https://datahub.ucsd.edu/user/arh003/tree?#assignments`. The browser's address bar and tabs are visible at the top. The JupyterHub interface includes a navigation bar with links to 'work', 'data sci/cs', 'cogs 108 IA', 'cse 151', 'canvas', 'GitHub', 'ide', 'gitlab', 'calendly', and 'Campuswire'. The main content area is titled 'jupyterhub' and features a 'Logout' button and a 'Control Panel' link. Below this, there are three sections: 'Released assignments', 'Downloaded assignments', and 'Submitted assignments'. The 'Released assignments' section shows a single entry: 'PracticeAssignment_COGS108_SP23' with a 'Fetch' button. The 'Downloaded assignments' section lists eight assignments (A1 through D8) with 'Submit' buttons. The 'Submitted assignments' section lists four assignments (A1 through A4) with 'Fetch Feedback' buttons. Each assignment entry includes a timestamp and a note about feedback availability.

Assignment Name	Course/ID	Action
Released assignments		
PracticeAssignment_COGS108_SP23	COGS108_SP23_A00	Fetch
Downloaded assignments		
A1_COGS108_Sp23	COGS108_SP23_A00	Submit
A2_COGS108_Sp23	COGS108_SP23_A00	Submit
A3_COGS108_Sp23	COGS108_SP23_A00	Submit
A4_COGS108_Sp23	COGS108_SP23_A00	Submit
D1_COGS108_Sp23	COGS108_SP23_A00	Submit
D2_COGS108_Sp23	COGS108_SP23_A00	Submit
D3_COGS108_Sp23	COGS108_SP23_A00	Submit
D4_COGS108_Sp23	COGS108_SP23_A00	Submit
D5_COGS108_Sp23	COGS108_SP23_A00	Submit
D6_COGS108_Sp23	COGS108_SP23_A00	Submit
D7_COGS108_Sp23	COGS108_SP23_A00	Submit
D8_COGS108_Sp23	COGS108_SP23_A00	Submit
Submitted assignments		
A1_COGS108_Sp23	COGS108_SP23_A00	Fetch Feedback
2023-04-18 05:23:59.768739 UTC		
2023-04-19 21:12:15.858414 UTC (feedback available to fetch)		
A2_COGS108_Sp23	COGS108_SP23_A00	Fetch Feedback
2023-05-09 22:44:16.224334 UTC (feedback available to fetch)		
A3_COGS108_Sp23	COGS108_SP23_A00	Fetch Feedback
2023-05-23 20:35:41.704202 UTC (feedback available to fetch)		
A4_COGS108_Sp23	COGS108_SP23_A00	Fetch Feedback

4) The randomized groups are scaring me!

We're running a case study, and groups will be randomized regardless of your preference (opt-in or opt-out)

Someone not participating? **Weekly surveys will help.**

5) Local machine vs. Datahub???

TL/DR: For projects, either one! Labs + assignments, **DATAHUB >>**

Why? Because that's where you fetch, validate, and submit the assignments from; plus your Datahubs are synced with the COGS108 GitHub.

- COGS 108 - Jason Fleischer [FA23]
ghcr.io/ucsd-ets/datascience-notebook:2023.4-stable (2 CPU, 4G RAM)

- COGS 108 - Jason Fleischer [FA23]
ghcr.io/ucsd-ets/scipy-ml-notebook:2023.4-stable (8 CPU, 16G RAM)

**Use these
environments (DO
NOT USE THE GPU
SERVER)!!**

6) Pieces of advice?

1) Do assignments early(!)

It's nice to get things out of the way!

2) Utilize office hours

We're here to help you succeed, promise.

3) Communicate

Please, *please*, **please** talk to your groupmates, the IAs/TAs, and even Professor Fleischer if you have questions/concerns/etc.

4) Try not to stress :)

Stressing just leads to a bad outcome (from personal experience); just breathe–YOU GOT THIS!!

Assignments and whatnot

Week 2 + 3:

- Practice assignment (Due today at 11:59pm)
- D1 (Due Friday, Oct 13 at 11:59PM)
- Quiz 2 (Due Monday, Oct 16 at 11:59PM)
- A1 (Due Wednesday, Oct 18 at 11:59PM)

A solid green vertical bar is positioned on the left side of the slide. A thin black horizontal line extends from the right edge of this bar across the top of the slide.

**Let's get
technical.**

A thin black line outlines a rounded rectangle in the bottom right corner of the slide.

Programming, pt I

You need to have the basics...but not too much (if you don't)!

Resources + Cheat sheets:

- <https://linktr.ee/cogs108resources>: Pandas, Git, and Python guides/tutorials!
- <https://github.com/COGS108/Resources>: COGS108 Resources
- <https://tinyletter.com/data-is-plural>: Cool datasets
- Google “Python cheat sheet,” “Pandas cheat sheet,” “Git cheat sheet”

Programming, pt II

Anaconda

Data science toolkit w/ Python and libraries (also Jupyter notebooks)

How to get it:

- Download, install, and verify on anaconda.com
- Make sure it's added system path:
 - For mac: export
PATH="/usr/local/anaconda3/bin:\$PATH"

Jupyter Notebook

Program interface that you can type Python code (in the browser)

Datahub

Cloud server that runs Jupyter Notebooks on your computer

- Fetch and submit assignments
- Don't need to install Jupyter onto your local machine(s)

Work checks!

How to check (and submit) your work:

1. Write **assert** cells below your code for your testing
2. Click **Validate** before submitting your notebooks*
3. Click **Submit** when you're ready**

* **Validate** just replicates the autograder's mechanics, NOT hidden tests

** Don't click **Submit** AFTER the deadline (unless you're submitting late)

(see slide xx for demo)

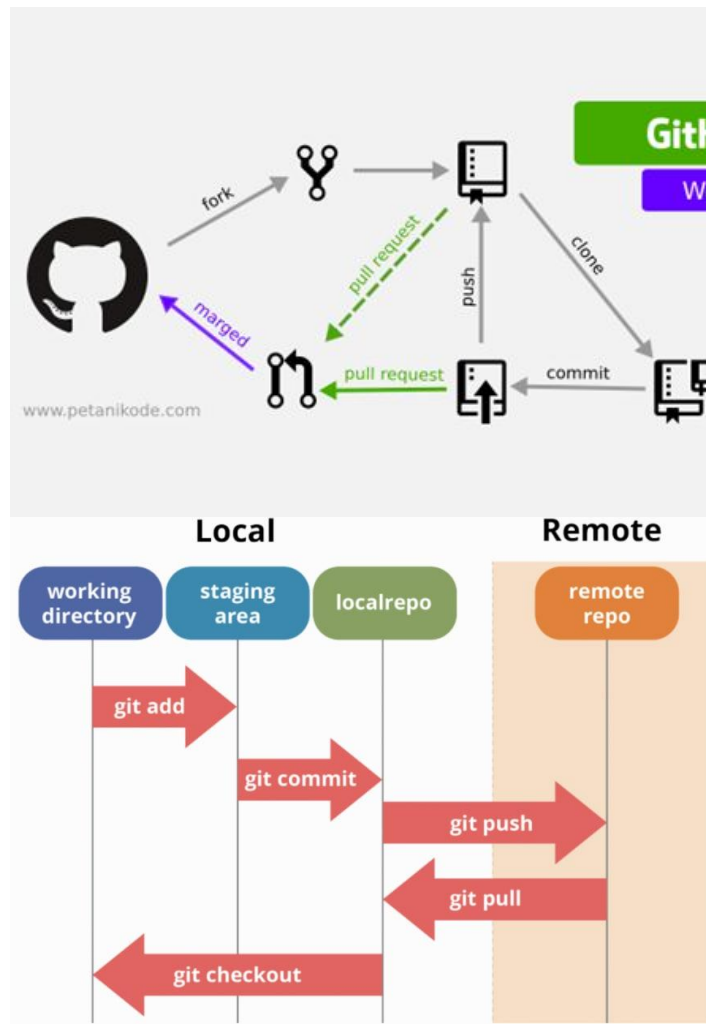

Git and GitHub

Git is a version control system; GitHub is where projects are stored—and shown—online

How to install Git:

- Go to <https://git-scm.com/downloads>
- Choose your OS (Windows/OS X/Linux)
- Follow the specific OS steps
- Verify installation
 - In terminal type “git --version”

Overall, Git is good because of version control, code reuse, backing up, and collaboration!

Demo 1: git stage, commit, and push

Git commands you'll use:

1. **git clone:** makes a clone/copy of repo at another directory
2. **git status:** displays state of working directory and staging
3. **git add:** adds changes to the working directory and staging area
4. **git commit:** commits changes made in the working directory
5. **git push:** uploads local repo content to the remote repo

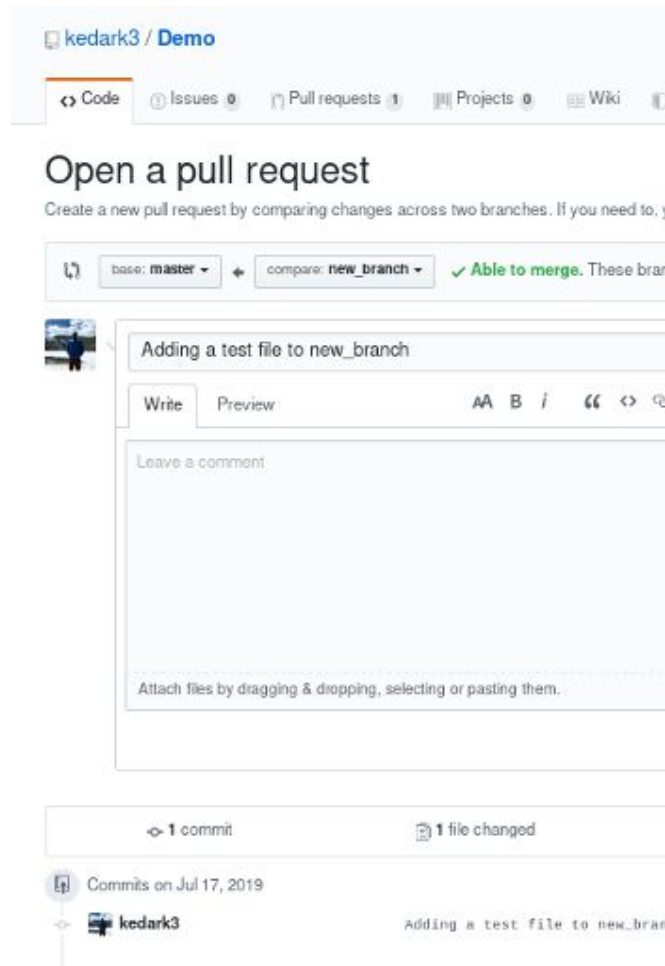

Work check, again.

Check for these things in your repo:

1. It's on your account (visible)
2. There's a README.md and .gitignore

Now...make a **pull request**:

1. Go to COGS108/MyFirstPullRequest
2. Make sure your PR shows up in that list.
3. Make sure your PR has the right title.
4. Make sure your PR has the right file (correct name).

Next week...

A1 discussion/help, more on git workflow

D1 Demo
